Federazione Italiana Malattie Rare

partecipation and training

Tuesday, June 13th, 2023

10.00 am – CET

WEBINAR

for information and registration

dii.unisalento.it

Active participation in European Union policies has become increasingly important over the years, thanks in part to new technologies that have enabled all citizens to be able to be informed and make their own contributions.

Health has proven to be one of the topics that have attracted the most interest, and in particular, the community of people with rare diseases has shown itself capable of a generous contribution expressed in a timely, competent, and rigorous manner.

Examples are the ERN projects to ensure uniformity of diagnosis and care across the countries of the Union and the positions expressed during European public consultations on the issues of accessibility, availability, and safety of medicines.

In this context, the continuing education of citizens and patient representatives assumes fundamental relevance, and interdisciplinary online training projects promoted by the DIDALab laboratory of the Department of Innovation Engineering of the University of Salento funded by the European Union, such as the Erasmus+ project called EUSecure, may well contribute to this.

Welcome Speech

Antonella Longo

Department of Engineering for Innovation
Unisalento

Speaker:

Massimo Marra

Patient Advisory Board - ERN NMD
